

Alignment of Eligible Content: More than Just Content

The crosswalk below is designed to show the alignment between the PA Academic Standard Eligible Content and the PA Common Core Eligible Content. While content is in many cases similar, the key message is that PA Common Core focused instruction is more rigorous and will prepare students for upcoming PSSAs and future PA Common Core aligned PSSAs.

The defining element of the PA Common Core Standards is one of rigor. Barbara Blackburn elaborates on the concept of rigor when she states: "True rigor is creating an environment in which each student is expected to learn at high levels, each student is supported so he or she can learn at high levels, and each student demonstrates learning at high levels.¹"

Focus on PA Common Core

As instruction segues from the PA Academic Standards to the PA Common Core Standards, it is important to understand the need to prepare students for the current and upcoming PA CC-aligned PSSAs and to consider not only the content but the degree of rigor embraced by the new standards. Instructional time should focus on three critical areas: (1) formulating and reasoning about expressions and equations, including modeling an association in bivariate data with a linear equation, and solving linear equations and systems of linear equations; (2) grasping the concept of a function and using functions to describe quantitative relationships; (3) analyzing two- and three-dimensional space and figures using distance, angle, similarity, and congruence, and understanding and applying the Pythagorean Theorem.

PA Common Core – Raising the Bar

Educators will note that the items developed to measure the new Assessment Anchors and Eligible Content (Common Core aligned AA/EC) will differ from the current PSSA items in both rigor and difficulty. This will be a direct result of the rigor of the new Assessment Anchors and Eligible Content where the average Depth of Knowledge (DOK) will be higher than the DOK of the existing PSSA Assessment Anchors and Eligible Content. As a result, educators should see items written at the higher cognitive levels (e.g., level 2 and level 3). However, that does not mean that a DOK level 1 item will not be found on the transitioned PSSA. For example, an item measuring math fluency is typically written at DOK level 1. For reading, there may be a vocabulary AA/EC that allows for an item to be written at DOK 1.

Regardless of the increased rigor of the items measuring the new Assessment Anchors and Eligible Content (Common Core aligned AA/EC), educators will also perceive the difficulty of the assessment to have increased.

Eye on the Standards

It is important to remember that while Assessment Anchors and Eligible Content provide the blueprint for the PSSA assessments, they are a reflection only of what can be assessed in large scale testing and do not reflect all of classroom instruction.

M8.A Numbers and Operations	M08.A-N The Number System	
M8.A.1.1 Represent numbers using scientific notation and/or exponential forms.	 M08.A-N.1.1.1 Determine whether a number is rational or irrational. For rational numbers, show that the decimal expansion terminates or repeats (limit repeating decimals to thousandths). M08.B-E.1.1.4 Perform operations with numbers expressed in scientific notation, including problems where both decimal and scientific notation are used. Express answers in scientific notation and choose units of appropriate size for measurements of very large or very small quantities (e.g., use millimeters per year for seafloor spreading). Interpret scientific notation that has been generated by technology (e.g., interpret 4 7EF9 displayed on a calculator as 4 7 × 109 	PACCS performs operations with numbers in scientific notation Use numbers in scientific notation to make estimates

degrees in the interior angles of a polygon in 3 - 8 sided figures (formula provided on the reference sheet).		PACCS Eligible Content
M8.B.2.1.2 Determine the measurement of one interior angle of a regular polygon (3-8 sided polygons, formula provided on the reference sheet).	Intentionally Blank	Not specifically addressed in PACCS Eligible Content
M8.B.2.1.3 Determine the number of sides of a polygon given the total number of degrees in the interior angles (3-8 sided polygons, formula provided on the reference sheet).	Intentionally Blank	Not specifically addressed in PACCS Eligible Content
M8.B.2.2.1 Calculate the surface area of cubes and rectangular prisms (formula provided on the reference sheet).	Intentionally Blank	Not specifically addressed in PACCS Eligible Content
M8.B.2.2.2 Calculate the volume of cubes and rectangular prisms (formulas provided on the reference sheet).	M08.C-G.3.1.1 Apply formulas for the volumes of cones, cylinders, and spheres to solve real-world and mathematical problems. Formulas will be provided.	PACCS addresses application to value problems
M8.B.2.2.3 Determine the appropriate type of measurement (circumference, perimeter, area, surface area, volume) for a given situation (e.g., which measurement is needed to determine the amount of carpeting for a room).	Intentionally Blank	Not specifically addressed in PACCS Eligible Content
M8.C Geometry	M08.C-G Geometry	
M8.C.1.1.1 Match the three-dimensional figure with its net (cube, cylinder, cone, prism, pyramid). Any measurements used should be consistent in the stem and answer choices.	 M08.C-G.1.1.1 Identify and apply properties of rotations, reflections, and translations. Example: Angle measures are preserved in rotations, reflections, and translations. M08.C-G.1.1.2 Given two congruent figures, describe a sequence of transformations that exhibits the congruence between them. M08.C-G.3.1.1 Apply formulas for the volumes of cones, cylinders, and spheres to solve realworld and mathematical problems. Formulas will be provided. 	PACCS goes into great detail with geometry related to rotations, reflections and translations, also, students need to know the formulas for volume and be able to use them. PACCS goes into different types of problems using the coordinate plane.
M8.C.1.1.2 Define, identify and/or use properties of angles formed by intersecting lines (complementary, supplementary,	M08.C-G.1.1.1 Identify and apply properties of rotations, reflections, and translations. adjacent and/or vertical angles).	rotations, reflections, and translations.	
M8.C.1.1.3 Define, identify and/or use properties of angles formed when two parallel lines are cut by a transversal (alternate interior, alternate exterior, vertical corresponding).	M08.C-G.1.1.1 Identify and apply properties of rotations, reflections, and translations. Example: Angle measures are preserved in rotations, reflections, and translations.	PACCS extends to rotations reflections and translation
M8.C.1.2.1 Use the Pythagorean Theorem to find the measure of a missing side of a right triangle (formula provided on the reference sheet – whole numbers only).	M08.C-G.2.1.1 Apply the converse of the Pythagorean theorem to show a triangle is a right triangle. M08.C-G.2.1.2 Apply the Pythagorean theorem to determine unknown side lengths in right triangles in real-world and mathematical problems in two and three dimensions. (Figures provided for problems in three dimensions will be consistent with Eligible Content in grade 8 and below) M08.C-G.2.1.3 Apply the Pythagorean theorem to find the distance between two points in a coordinate system.	PACCS mentions the proof of the Pythagorean Theorem and applying the Pythagorean Theorem to finding the distance between two points on the coordinate plane
M8.C.3.1.1 Plot, locate or identify ordered pairs on a coordinate plane (the point may be a vertex of a polygon).	M08.C-G.1.1.1 Identify and apply properties of rotations, reflections, and translations. Example: Angle measures are preserved in rotations, reflections, and translations.	PACCS extends to rotations reflections and translation
Intentionally Blank	M08.C-G.1.1.3 Describe the effect of dilations, translations, rotations, and reflections on two-dimensional figures, using coordinates.	Not specifically addressed in PA Academic Standard Eligible Content. In transitioning to PACCS, these specific statements will be assessed and should be explicitly addressed
Intentionally Blank	M08.C-G.1.1.4 Given two similar two- dimensional figures, describe a sequence of transformations that exhibits the similarity between them.	Not specifically addressed in PA Academic Standard Eligible Content. In transitioning to PACCS, these specific statements will be assessed and should be explicitly addressed.
M8.D Algebraic Concepts	M08.B-E Expressions and Equations M08.B-F Functions	

PA Academic Standards Eligible Content 	PA Common Core Standards Eligible Content 	Comment
M8.D.1.1.1 Continue a numeric or algebraic pattern (pattern must show 3 repetitions – may include up to 2 operations, squares and square roots).	Intentionally Blank	Not specifically addressed in PACCS Eligible Content
M8.D.1.1.2 Find missing elements in numeric or geometric patterns and/or functions (may be given a table or rule – pattern must show 3 repetitions).	Intentionally Blank	Not specifically addressed in PACCS Eligible Content
M8.D.1.1.3 Determine the rule of a function (given elements in an input-output table, chart or list – limit to linear functions).	M08.B-F.1.1.1 Determine whether a relation is a function.	PACCS determination functions
	M08.B-F.1.1.2 Compare properties of two functions each represented in a different way (i.e., algebraically, graphically, numerically in tables, or by verbal descriptions). Example: Given a linear function represented by a table of values and a linear function represented by an algebraic expression, determine which function has the greater rate of change.	Not specifically addressed in PA Academic Standard Eligible Content.
M8.D.2.1.1 Solve one- or two-step equations and inequalities (should not include absolute values – one variable only).	 M08.B-E.3.1.1 Write and identify linear equations in one variable with one solution, infinitely many solutions, or no solutions. Show which of these possibilities is the case by successively transforming the given equation into simpler forms, until an equivalent equation of the form x = a, a = a, or a = b results (where a and b are different numbers). M08.B-E.3.1.2 Solve linear equations that have rational number coefficients, including equations whose solutions require expanding expressions using the distributive property and collecting like terms. M08.B-F.1.1.3 Interpret the equation y = mx + b as defining a linear function whose graph is a straight line; give examples of functions that are not linear. 	PACCS asks for examples of linear equations with one, infinite or no solutions rational coefficients in equations are used. Linear functions are specifically mentioned
M8.D.2.1.2 Use substitution to check the accuracy of a given value for an equation or inequality (simple inequalities with one variable).	M08.B-F.2.1.1 Construct a function to model a linear relationship between two quantities. Determine the rate of change and initial value of the function from a description of a	PACCs talks about functions only in more detail than PA

PA Academic Standards Eligible Content 	PA Common Core Standards Eligible Content 	Comment
	relationship or from two (x, y) values, including reading these from a table or from a graph, Interpret the rate of change and initial value of a linear function in terms of the situation it models and in terms of its graph or a table of values.	
M8.D.2.1.3 Determine the value of an algebraic expression by simplifying and/or substituting a number for the variable.	M08.B-F.2.1.1 Construct a function to model a linear relationship between two quantities. Determine the rate of change and initial value of the function from a description of a relationship or from two (x, y) values, including reading these from a table or from a graph. Interpret the rate of change and initial value of a linear function in terms of the situation it models and in terms of its graph or a table of values.	PACCS talks about functions only in more detail than PA Academic
M8.D.2.2.1 Match a written situation to its numeric and/or algebraic expression, equation or inequality (up to two variables in equations or expressions – one variable with inequalities).	M08.B-F.2.1.2 Describe qualitatively the functional relationship between two quantities by analyzing a graph (e.g., where the function is increasing or decreasing, linear or nonlinear). Sketch or determine a graph that exhibits the qualitative features of a function that has been described verbally.	PACCS analyzes graphs
M8.D.2.2.2 Write and/or solve an equation for a given problem situation (one variable only).	 M08.B-E.3.1.2 Solve linear equations that have rational number coefficients, including equations whose solutions require expanding expressions using the distributive property and collecting like terms. M08.B-F.2.1.2 Describe qualitatively the functional relationship between two quantities by analyzing a graph (e.g., where the function is increasing or decreasing, linear or nonlinear). Sketch or determine a graph that exhibits the qualitative features of a function that has been described verbally. 	PACCS extends to more complicated linear equations and graphical analysis
M8.D.4.1.1 Graph a linear function based on an x/y table (integers only).	M08.B-E.3.1.1 Write and identify linear equations in one variable with one solution, infinitely many solutions, or no solutions. Show which of these possibilities is the case by successively transforming the given equation into simpler forms, until an equivalent	PACCS asks for examples of linear equations with one, infinite or no solutions, rational coefficients in equations are used. Linear functions are specifically mentioned

PA Academic Standards Eligible Content 	PA Common Core Standards Eligible Content 	Comment
	equation of the form $x = a$, $a = a$, or $a = b$	
M8.D.4.1.2 Match the graph of a linear function to its x/y table (integers only).	M08.B-E.3.1.1 Write and identify linear equations in one variable with one solution, infinitely many solutions, or no solutions. Show which of these possibilities is the case by successively transforming the given equation into simpler forms, until an equivalent equation of the form $x = a$, $a = a$, or $a = b$ results (where a and b are different numbers).	PACCS asks for examples of linear equations with one, infinite or no solutions, rational coefficients in equations are used. Linear functions are specifically mentioned
M8.D.4.1.3 Match the linear equation (y = mx + b form) to the x/y table (integers only in the table).	 M08.B-E.2.1.3 Derive the equation y = mx for a line through the origin and the equation y = mx + b for a line intercepting the vertical axis at b. M08.B-E.3.1.2 Solve linear equations that have rational number coefficients, including equations whose solutions require expanding expressions using the distributive property and collecting like terms. 	PACCS moves beyond matching
Intentionally Blank	M08.B-E.3.1.3 Interpret solutions to a system of two linear equations in two variables as points of intersection of their graphs, because points of intersection satisfy both equations simultaneously.	Not specifically addressed in PA Academic Standard Eligible Content. In transitioning to PACCS, these specific statements will be assessed and should be explicitly addressed.
Intentionally Blank	M08.B-E.3.1.4 Solve systems of two linear equations in two variables algebraically, and estimate solutions by graphing the equations. Solve simple cases by inspection. Example: $3x + 2y = 5$ and $3x + 2y = 6$ have no solution because $3x + 2y$ cannot simultaneously be 5 and 6.	Not specifically addressed in PA Academic Standard Eligible Content. In transitioning to PACCS, these specific statements will be assessed and should be explicitly addressed.
Intentionally Blank	M08.B-E.3.1.5 Solve real-world and mathematical problems leading to two linear equations in two variables. Example: Given coordinates for two pairs of points, determine whether the line through the first pair of points intersects the line	Not specifically addressed in PA Academic Standard Eligible Content.
